EKDANT EQUIPMENTS PVT.LTD

THE COMPLETE CLEAN
& HYGINE SOLUTION

WELCOME TO OUR COMPANY

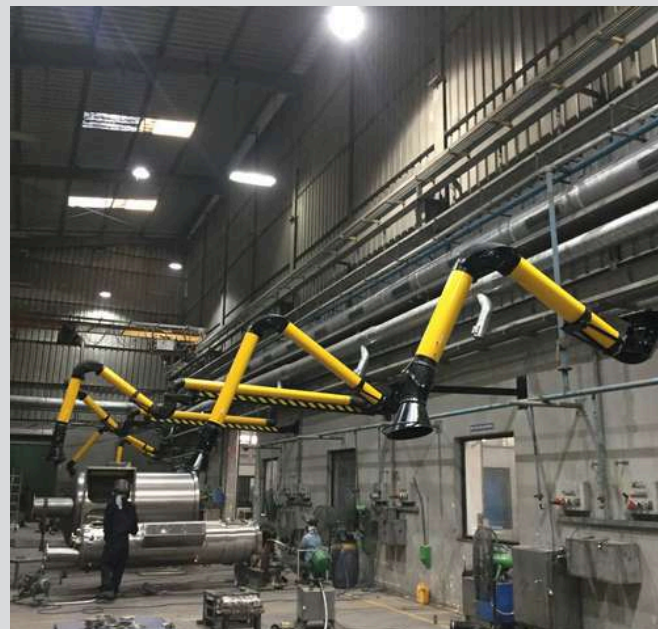

We as Ekdant Equipments Pvt Ltd, is committed to providing world class solutions in the field of dust and fume extraction technology in India.

**We represents ULMATEC
NAF German Technology
manufactured in India
under the License of
ULMATEC Germany.**

OUR SUSTAINABILITY VISION

As a leading supplier of environmental technology for more than 15 years, EEPL has helped reduce the environmental impact from industrial production and create safe and clean working environments. Today we focus more than ever on progressing our positive contribution to sustainable production. Follow us on our journey.

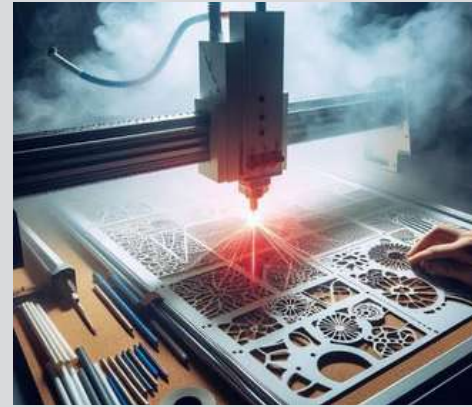

We offer the widest range of products and solutions for extraction and filtration of dust and particles, welding fumes, exhaust fumes, oil mist, gases and combustible dust. Your industrial air filtration expert!

OUR PRODUCTS

- 01 Dust Extractor
- 02 Fume Extractor
- 03 Wet Separator
- 04 Filter Tower
- 05 Oil/Coolant Mist Collector
- 06 Industrial Vacuum Cleaner

PROCESS WITH FREQUENT EXTRACTION

CLEAN AIR AT THE WORK PLACE

Various Extraction methods-extraction at source by existing outlets, hoods or extraction arm, extraction at the working tools or complete hall extraction-have been designed to achieve high standards of environmental management in the factory.

Our Filter provide the highest filtration efficiency > 99.9% according to DIN standards EN 60335-2-69AA. The cleanable filters used by us ensure higher filter life and lower operating costs. A wide selection of filters (cartridge, HEPA, activated Carbon etc.) with different options for the filter cleaning (manual Pneumatic, pulse Jet) ensure consistent filtration efficiency for every application.

Through close cooperation with partners and suppliers, we provides cost-effective products, manufactured under stringent quality standards (TUV, CE) to ensure low maintenance and longer life of the units.

EMULSION MIST SEPARATORS

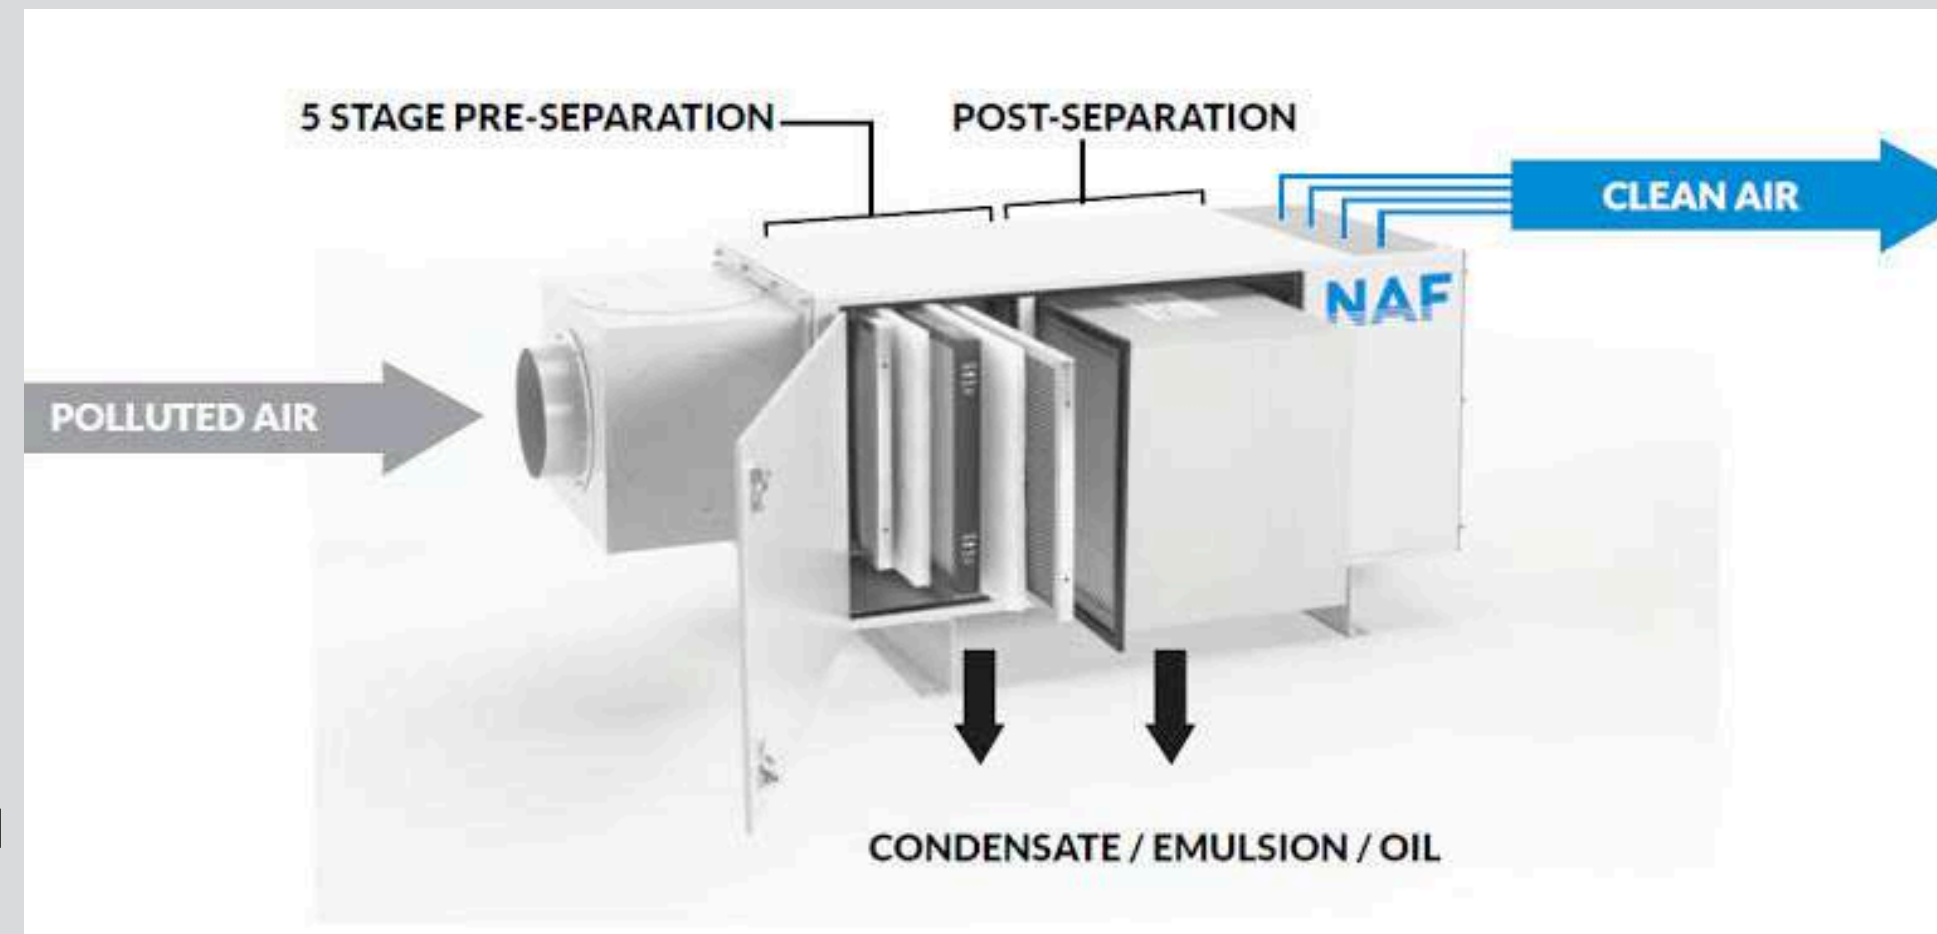

In cutting as well as non cutting metalworking processes, the coolant lubricants produce aerosols, mist and vapours that contaminate the air in production facilities and affect the health of the operators.

NAF air purification devices are based on a mechanical filtration and separation process that consist of a five stage pre separation in combination with a variable post-separation process.

The pre-separation consists of an ideal adapted combination of metal mesh separators, filter fleeces, and, at its core, the long life separator. The post - separation consist of a H13 HEPA filter (separation rate > 99.95% based on partical size of 0.4µm).

THE LONGLIFE SEPARATOR

The heart of every OILEX air cleaning unit is the Longlife separator developed by AFS. This is a self-cleaning baffle plate separator, which ensures that all particles from a size of two thousandths of a millimeter (2.0 µm) are completely separated from the air stream. Independent studies confirm the high efficiency of the AFS technology.

AIRFLOW

100 - 150000 m³/h

Size : XS to XXL

EEPL helps an impressive list of industrial and governmental institutions efficiently manage their hazardous dust and fume pollution. ULMATEC NAF comprehensive suite of products range from compact, mobile dust or fume collectors to large centralized dust and fume extraction systems.

Advantages

Energy Efficient Systems

Low Operating Cost

Small Foot Print

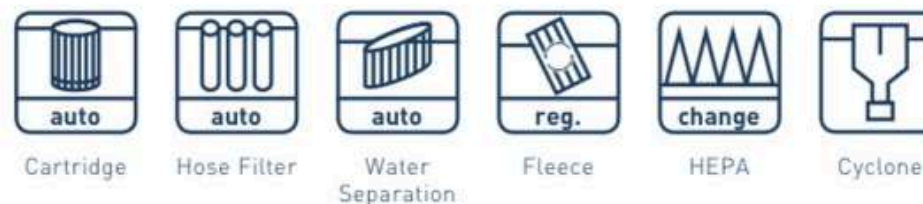

Plug & Play

Minimal Service
